Open to Full-Stack internships

PROFILE

Software Engineering student at Dire Dawa University in Ethiopia, building a strong foundation in full-stack web development. Most of my learning happens by doing: I pick an idea, break it down, and build it — starting with responsive front-end interfaces and gradually working deeper into how real applications are structured. Comfortable with Git, Linux, and figuring things out independently; actively seeking an internship where I can contribute, receive feedback, and learn how engineering works in a real team environment.

EDUCATION

Dire Dawa University — Ethiopia — Studying

B.Sc. Studies — Software Engineering

SKILLS

Frontend:

HTML5 | CSS3 | Tailwind CSS | JavaScript

Programming:

Python

Tools:

Git | GitHub | Linux / Ubuntu

PROJECTS

Local Service Connector

Live demo · GitHub

Frontend Developer

A responsive web app for finding trusted local service professionals — search by category and location, compare ratings and price ranges, and send service requests you can track from a dashboard.

- **Problem:** Finding reliable local professionals (plumbers, electricians, tutors and more) meant juggling phone calls and word of mouth with no easy way to compare ratings, pricing and availability in one place.
- **Role:** Built the responsive UI, search and filtering, provider listings and request flow, and deployed it to Vercel.
- **Tech:** HTML, Tailwind CSS, JavaScript, Lucide Icons, Vercel

EXPERIENCE

Software Engineering Internship

Current / Upcoming

Company: To be added — internship details will be added once confirmed.
